I received your voicemail from today following up on your request for additional information with respect to the sampling event. EPA is prepared to perform the groundwater sampling at the Site from Monday, December 12, to Wednesday, December 14. During that period of time, EPA will clear the sampling locations, check for underground utilities, install temporary monitoring wells (3-inch holes), and collect groundwater samples. Attached is a map prepared by the EPA On-Scene Coordinator, which depicts proposed locations for the three temporary wells (highlighted in yellow). Please let me know if you have any questions or concerns regarding this map or the planned sampling activity.
